<b>1 Thermapl Processing of Milk</b>	<b>1</b>
<i>Peter de Jong</i>	
1.1 Introduction	2
1.1.1 Background	2
1.1.2 Outline	2
1.2 Heat-induced changes of milk	3
1.2.1 Heat-induced reactions in milk – bulk reactions	3
1.2.1.1 Destruction of microorganisms	6
1.2.1.2 Inactivation of enzymes	6
1.2.1.3 Denaturation of proteins	6
1.2.1.4 Loss of nutrients	6
1.2.1.5 Formation of new components	6
1.2.2 Heat-induced reactions in milk – surface reactions	7
1.2.3 Reaction engineering approach	7
1.3 Processes	9
1.3.1 Equipment	9
1.3.1.1 Continuous indirect heating systems	9
1.3.1.2 Continuous direct heating systems	10
1.3.1.3 (Semi) Batch heating systems	10
1.3.2 Classification of heating processes	11
1.3.2.1 Thermization	12
1.3.2.2 Pasteurization	12
1.3.2.3 UHT	12
1.3.2.4 Sterilization	13
1.3.3 Advanced processes	13
1.3.3.1 ESL	13
1.3.3.2 ISI	14

---

1.4	Operational considerations and limitations	15
1.4.1	Flow characteristics	15
1.4.2	Protein and mineral fouling	16
1.4.2.1	Types of fouling	16
1.4.2.2	Fouling mechanism	17
1.4.2.3	Factors affecting fouling	18
1.4.3	Adherence and growth of microorganisms	19
1.5	Optimization	22
1.5.1	Introduction	22
1.5.2	Approach	23
1.5.3	Case study: pasteurization	25
1.6	Conclusions and future trends	28
1.6.1	Longer operating times	28
1.6.2	Integrating technologies	29
1.6.3	Model-based control of heating processes	30
	References	31
<b>2</b>	<b>Applications of Membrane Separation</b>	<b>35</b>
	<i>Athanasios Goulas and Alistair S. Grandison</i>	
2.1	Introduction	36
2.2	Transport theory of membrane separation processes	37
2.2.1	Classification of processes	37
2.2.1.1	Microfiltration and ultrafiltration	38
2.2.1.2	Reverse osmosis and nanofiltration	39
2.2.1.3	Electrodialysis and electro-membrane filtration	41
2.2.2	Concentration polarization and fouling	42
2.2.3	Physical parameters of membrane processes	45
2.2.4	Diafiltration	46
2.2.5	Parameters affecting flux and rejection	47
2.3	Membrane classification, production methods and characterization	48
2.4	Modules and modes of operation of pressure-driven membrane filtration processes	50
2.5	Hygiene and cleaning	54
2.6	Composition and properties of dairy fluids for membrane processing	55
2.7	Applications of membranes in the dairy industry	57
2.7.1	Reverse osmosis	57
2.7.2	Nanofiltration	58
2.7.3	Ultrafiltration	58
2.7.3.1	Manufacture of cheese and fermented products	59
2.7.3.2	Whey processing	60
2.7.3.3	Use of permeate	60
2.7.4	Microfiltration	61
2.7.4.1	Removal of microorganisms	61
2.7.4.2	Removal of fat globules	62
2.7.4.3	Fractionation of macromolecules	62

---

2.7.5	Electrodialysis and electro-membrane filtration	62
2.7.6	Membrane bioreactors	63
2.7.6.1	Classification of membrane bioreactors and biocatalyst stability	64
2.7.6.2	Basic theory characterizing membrane bioreactor operation	67
2.7.6.3	Applications of membrane bioreactors and fermenters in the dairy industry	68
2.7.7	Selective separations of dairy-derived carbohydrates by nanofiltration	69
2.8	Future developments	70
	References	71
<b>3</b>	<b>Hygiene by Design</b>	<b>75</b>
	<i>J. Ferdie Mostert and Elna M. Buys</i>	
3.1	Introduction	76
3.2	Maintaining a clean working environment in dairy plant operations	77
3.2.1	Introduction	77
3.2.2	Regulations	77
3.2.3	Sources of contamination	79
3.2.3.1	Non-product contact surfaces	79
3.2.3.2	Environmental factors	83
3.2.3.3	Plant and manufacturing equipment	85
3.2.3.4	Human activities	87
3.2.3.5	Animals and pests	87
3.2.4	Waste and effluent management	90
3.3	Clean room design	91
3.3.1	Hygienic plant design	91
3.3.2	Dealing with airborne contamination	92
3.3.2.1	Sources and routes of airborne microorganisms	92
3.3.2.2	Air-quality control	93
3.3.3	Hygienic equipment design	94
3.4	Clean room operations	96
3.4.1	Objectives of plant cleaning	96
3.4.2	Cleaning operations	97
3.4.2.1	Principles of the cleaning process	97
3.4.2.2	Selection and functional properties of detergents	98
3.4.2.3	Methods for cleaning of dairy equipment	101
3.4.3	Sanitization and sterilization	105
3.4.3.1	Principles of sanitization and sterilization	105
3.4.3.2	Methods of sanitization and/or sterilization	105
3.5	Dealing with biofilms	107
3.5.1	Biofilm formation	108
3.5.2	Detection of biofilms	109
3.5.3	Biofilm control/removal	110

3.6	Monitoring dairy plant hygiene	111
3.6.1	Air quality	111
3.6.2	Cleanliness of sanitized surfaces	112
3.6.3	Water quality	114
	References	114
<b>4</b>	<b>Automation in the Dairy Industry</b>	<b>121</b>
	<i>Evangelos Doxanakis and Asterios Kefalas</i>	
4.1	Introduction	122
4.2	A brief history of automation in the dairy	122
4.3	Factors contributing to automation	124
4.3.1	Six factors driving automation	124
4.4	Benefits of automation	125
4.5	Conceptual framework of an automated system	125
4.5.1	What is a system?	125
4.5.2	Objects	126
4.5.2.1	Inputs	126
4.5.2.2	Processes	127
4.5.2.3	Outputs	127
4.5.2.4	Relationships	127
4.5.2.5	Attributes	128
4.5.2.6	Feedbacks	128
4.5.2.7	Boundary	128
4.5.2.8	Environment	128
4.6	Stages in automation in the dairy	129
4.6.1	First wave: mechanization	129
4.6.1.1	Summary	130
4.6.2	Second wave: automation	130
4.6.2.1	A typical example	130
4.6.2.2	Two examples	132
4.6.3	Third wave: cybernation	135
4.6.3.1	Some new applications	136
4.6.3.2	Lotus integrated food safety system	136
4.6.3.3	Goal of LIFSS	138
4.6.3.4	Sub-systems	139
4.6.3.5	Track & Trace System – TRACER	142
4.6.3.6	Summary	142
4.7	Lotus integrated safety system – a case study in the dairy industry	143
4.7.1	Summary	146
4.8	Automation at the enterprise level	147
4.8.1	Logistics in dairy: how it helps	149
4.8.2	Enterprise Resource Planning	150
4.8.2.1	ERP: benefits	151
4.8.2.2	Summary	151

---

4.9	Conclusions	152
	References	152
<b>5</b>	<b>Safety and Quality of Dairy Products</b>	<b>153</b>
	<i>Peter J. Jooste and Lucia E.C.M. Anelich</i>	
5.1	Introduction	154
5.2	Pathogens of special relevance	155
5.2.1	Introduction	155
5.2.2	Prions	156
5.2.3	Viruses	157
5.2.4	Rickettsiae	158
5.2.5	Protozoa	158
5.2.5.1	<i>Cryptosporidium</i>	159
5.2.6	Bacteria	160
5.2.6.1	<i>Brucella</i>	160
5.2.6.2	<i>Mycobacterium</i>	160
5.2.6.3	<i>Enterobacteriaceae</i>	161
5.2.6.4	<i>Campylobacter jejuni</i>	164
5.2.6.5	<i>Staphylococcus aureus</i>	165
5.2.6.6	<i>Listeria monocytogenes</i>	166
5.2.6.7	<i>Bacillus cereus</i>	168
5.3	Chemical hazards	168
5.3.1	Mycotoxins	169
5.3.2	Antimicrobials	170
5.3.3	Allergens	171
5.3.4	Industrial and environmental contaminants	171
5.3.4.1	Pesticide residues	171
5.3.4.2	Dioxins and polychlorinated biphenyls	172
5.3.4.3	Heavy metals	173
5.3.5	Procedures to minimize risk of feed and milk contamination	173
5.4	Physical hazards	174
5.5	Traceability of ingredients	176
	References	178
<b>6</b>	<b>Modern Laboratory Practices – Analysis of Dairy Products</b>	<b>183</b>
	<i>Thomas Bintsis, Apostolos S. Angelidis and Lefki Psoni</i>	
6.1	Introduction	184
6.2	Laboratory quality assurance	184
6.2.1	Accreditation of laboratories	185
6.2.2	Validation of analytical methods	187
6.2.3	Quantifying uncertainty, calibration and traceability	187
6.2.4	Quality aspects of microbiological media	188
6.2.5	Laboratory safety	189

6.3	Sampling	190
6.3.1	Sample collection	191
6.3.2	Sampling report	192
6.4	Chemical analyses	192
6.4.1	Fat content	193
6.4.2	Protein content	193
6.4.3	Total solids	196
6.4.4	Ash content	196
6.4.5	Lactose content	196
6.4.6	Urea determination	197
6.4.7	Salt content	197
6.4.8	Routine instrumental methods	197
6.5	Detection of antibiotic residues	198
6.6	Detection of adulteration in dairy products	203
6.7	Detection of abnormal milk	211
6.8	Microbiological methods	212
6.8.1	Standard plate count	212
6.8.2	Direct microscopic count	214
6.8.3	Direct epifluorescent technique	214
6.8.4	Spiral plate counting	214
6.8.5	Bactoscan	215
6.8.6	Dye reduction tests	215
6.8.7	Determination of pyruvate or ammonia	216
6.8.8	Contaminating microorganisms	216
6.8.9	Thermoduric bacteria	217
6.8.10	Coliforms and Enterobacteriaceae	217
6.8.11	<i>Enterococcus</i> spp.	218
6.8.12	Yeasts and moulds	219
6.8.13	Specific pathogenic bacteria	219
6.8.13.1	<i>Listeria monocytogenes</i>	219
6.8.13.2	<i>Staphylococcus aureus</i>	220
6.8.13.3	<i>Escherichia coli</i>	220
6.8.13.4	<i>Salmonella</i> spp.	220
6.8.13.5	<i>Yersinia enterocolitica</i>	221
6.8.13.6	<i>Enterobacter sakazakii</i>	221
6.9	Rapid microbiological methods	221
6.9.1	Antibody-based methods	222
6.9.2	Nucleic-acid-based methods	227
6.9.2.1	DNA hybridization	228
6.9.2.2	Polymerase chain reaction (PCR)	229
6.9.3	Membranes	232
6.9.3.1	Hydrophobic grid membrane filter	232
6.9.4	Impedance	232
6.9.5	Biochemical enzymatic methods and diagnostic kits	233
6.9.6	ATP bioluminescence	234

6.10 Sensory evaluation of dairy products	234

<b>7 Dealing with Environmental Issues</b>	<b>262</b>
<i>Trevor J. Britz, Corné Lamprecht and Gunnar O. Sigge</i>	
7.1 Introduction	263
7.2 Dairy wastewaters: sources and composition	263
7.2.1 General composition of dairy wastewaters	263
7.2.2 Milk reception and storage areas	264
7.2.3 Heat processing of milk	265
7.2.4 Production of evaporated milk products	265
7.2.5 Production of powdered dairy products	265
7.2.6 Cheese manufacture	266
7.2.7 Butter manufacture	266
7.2.8 Yoghurt manufacture	266
7.3 Treatment options	267
7.3.1 Direct discharge to a sewage-treatment works	267
7.3.2 Pre-treatment options	268
7.3.2.1 Screening	268
7.3.2.2 Equilibration tanks	268
7.3.2.3 FOG removal	269
7.3.3 Aerobic biological systems	271
7.3.3.1 Activated sludge systems	271
7.3.3.2 Sequencing batch reactors	272
7.3.3.3 Trickling filters	273
7.3.3.4 Rotating biological contactors	274
7.3.3.5 Lagoon technology	275
7.3.3.6 Natural treatment systems	277
7.3.3.7 Wetlands	278
7.3.4 Anaerobic biological systems	280
7.3.4.1 Conventional systems	280
7.3.4.2 High-rate anaerobic systems	281
7.3.4.3 Separated phase digesters	284
7.3.5 Chemical systems	286
7.3.5.1 Chemical treatments	286
7.3.5.2 Oxidation technology	286
7.4 Conclusions	287
References	288
