
Table of Contents

Chapter 1 Cheesemaking — An Overview

Cheese Types

Cheesemaking

 Milk Pretreatment

 Coagulation

 Syneresis

 Shaping and Salting

 Ripening

 Process Cheese

References

Chapter 2 Fundamental Rheological Methods

Definition of Rheology

Basic Concepts

 Strain

 Stress

 Strain Rate

Fundamental Methods

 Uniaxial Compression

 Uniaxial Tension

 Bending Test

 Specimen with a Rectangular Cross-Section

 Specimen with a Circular Cross-Section

 Torsion Test

 Vane Method

 Stress-Relaxation Test

 Analysis of Relaxation Behavior

 Creep Test

 Analysis of Creep Behavior

Shear Rheometry

 Sliding-Plates Geometry

 Concentric-Cylinders Geometry

 Cone-and-Plate Geometry

 Parallel-Plate Geometry

 Capillary Rheometry

Extensional Rheometry

 Lubricated Squeezing Flow

 Equations for Different Fluids in Lubricating Squeezing Flow

References

Chapter 3 Uniaxial Testing of Cheese

- Uniaxial Compression Measurements
- Structure and Composition Effects
- Stress-Relaxation Measurements
- Torsion Measurements
- Tension Measurements
- Creep Measurements
- Bending Measurements
- Vane Measurements
- Shear Measurements
- Lubricated Squeezing Flow Measurements
- References

Chapter 4 Fracture Properties of Cheese

- Fracture Mechanics
- Brittle Fracture
- Griffith Criterion
- Determination of K_I
- Fracture Tests on Cheese
 - Notch Tests
- Cutting, Slicing, and Shredding
- Cutting with Wire and Blade
- Eye/Slit Formation and Growth
- References

Chapter 5 Linear Viscoelasticity of Cheese

- Mathematical Relations in Linear Viscoelasticity
- Types of SAOS Measurements
 - Strain (or Stress) Sweep
 - Frequency Sweep
 - Temperature Sweep
 - Time Sweep
- Time–Temperature Superposition
- Application of SAOS in Cheese Rheology
 - Linear Viscoelastic Region of Cheeses
 - Cheddar Cheese
 - Gouda Cheese
 - Mozzarella Cheese
 - Mozzarella: Time–Temperature Superposition Example
 - Feta Cheese
 - Imitation Cheese
 - Quarg Cheese
 - Processed Cheese
- Cox–Merz Rule
- References

Chapter 6 Nonlinear Viscoelasticity of Cheese

- Pipkin Diagram
- Sliding Plate Rheometer
- Large Amplitude Oscillatory Shear Flow
- Spectral Analysis
- Discrete Fourier Transform
- Determining Material Properties
- Amplitude Spectrum
- Stress–Shear Rate Loops
- Effect of Wall Slip
- Constitutive Model for Cheese
- Relaxation Modulus Obtained from SAOS
- Relaxation Modulus Conforming to LAOS
- References

Chapter 7 Cheese Texture

- Texture Development in Cheese
 - Cheese Manufacturing Factors that Affect Texture
 - Textural Changes during Storage
- Measurement of Texture
 - Texture Profile Analysis
 - TPA Testing of Cheese
- Uniaxial Tests for Cheese Texture Measurement
 - Compression Test
 - Wedge Fracture Test
- Torsion Test and Vane Rheometry
 - Texture Map
- Dynamic Tests
- Empirical Tests
 - Crumbliness
 - Cone Penetrometer
 - Stringiness
- References

Chapter 8 Measuring Cheese Melt and Flow Properties

- Meltability
- Empirical Tests
- Objective Tests
 - Steady Shear Viscometry
- Capillary Rheometry
- Squeeze-Flow Rheometry
- UW Meltmeter
- Viscoelasticity Index for Cheese Meltability
- Dynamic Shear Rheometry
- Helical Viscometry

- Cheese Melt Profile Measurement
- UW Melt Profiler
- Determination of Melt Profile Parameters
 - Graphical Method
- Modeling Melt Profile
 - Constant Temperature Test
 - Transient Temperature Test
- Conduction Heating
- References

Chapter 9 Measuring Cheese Stretchability

- Empirical Methods
- Instrumented Methods
- Vertical Elongation
- Horizontal Extension
- Compression Tests
- Helical Viscometry
- Fiber-Spinning Technique
- The Weissenberg Effect
- References

Chapter 10 Factors Affecting Functional Properties of Cheese

- Properties of Milk
- Cheesemaking Procedures
 - Addition of Starter Culture and Coagulants
 - Curd Handling
 - Cooking, Stretching, and Cooling
- Cheese Composition
 - Moisture Content
 - Fat Content
 - Salt Content
 - pH
- Post-Manufacturing Processes
 - Aging/Ripening
 - Freezing and Frozen Storage
 - Heat Processing
 - Other Factors
- References
