Foreword	ix
Preface	xi
Acknowledgments	xiii
<b>1 Introduction to the Problems of Analysis and Control of Electric Power Systems</b>	<b>1</b>
1.1 Preliminaries	1
1.2 The Equilibrium Operation	5
1.3 Operating Requirements	8
1.4 Admissibility Limits for Single Components	12
1.5 Typical Examples of Nonexistence of the Equilibrium Operation	14
1.6 Synchronizing Actions Between Machines	19
1.7 The Perturbed Operation	27
1.8 Dynamic Phenomena and Their Classification	30
Annotated References	33
<b>2 Configuration and Working Point</b>	<b>34</b>
2.1 Preliminaries	34
2.2 Choice of the Working Point	55
2.3 Analytical Criteria for Economic Optimization	77
2.4 Previsional Scheduling	139

2.5	Real-Time Scheduling	161
	Annotated References	172
<b>3</b>	<b>Frequency and Active Power Control</b>	<b>173</b>
3.1	Speed Regulation of a Single Unit in Isolated Operation	173
3.2	Typical Schemes for Speed Governors	193
3.3	“f/P” Control in an Isolated System	225
3.4	“f/P” Control in the Presence of Interconnections	259
3.5	Emergency Control	277
	Annotated References	287
<b>4</b>	<b>Dynamic Behavior of the Synchronous Machine</b>	<b>289</b>
4.1	Basic Formulations	289
4.2	Usual Simplifications	309
4.3	More Sophisticated Models	316
4.4	Some Operational Examples	331
	Annotated References	351
<b>5</b>	<b>Dynamic Behavior of Network Elements and Loads</b>	<b>352</b>
5.1	Preliminaries	352
5.2	Generalities on Network Elements	353
5.3	Transformers	367
5.4	Alternating Current (ac) Lines	381
5.5	Direct Current (dc) Links	417
5.6	Single and Composite Loads	438
5.7	Purely Electrical Phenomena	457
	Annotated References	485
<b>6</b>	<b>Voltage and Reactive Power Control</b>	<b>486</b>
6.1	Generalities	486
6.2	Control of Synchronous Machine Excitation	493
6.3	Control of Tap-Changers	522
6.4	Control of Static Compensators	534
	Annotated References	561
<b>7</b>	<b>The Synchronous Machine Connected to an Infinite Bus</b>	<b>562</b>
7.1	Preliminaries	562
7.2	Small Perturbation Behavior	568

7.3 Large Perturbation Behavior	611
Annotated References	618
<b>8 Electromechanical Phenomena in a Multimachine System</b>	<b>619</b>
8.1 Preliminaries	619
8.2 Linearized Analysis	625
8.3 Stability of the Relative Motion	641
8.4 Simplification of the Overall Model	649
8.5 Effect of Feedbacks Sensitive to the Motion of Machines	664
Annotated References	675
<b>Appendix 1 Transformation to Symmetrical Components</b>	<b>676</b>
Annotated References	679
<b>Appendix 2 Park's Transformation</b>	<b>680</b>
Annotated References	687
<b>Appendix 3 Elementary Outline of the Automatic Control Theory</b>	<b>688</b>
A3.1 Preliminaries	688
A3.2 Stability and Response Modes	690
A3.3 Frequency Response	692
A3.4 Elementary Control Systems: Generalities	694
A3.5 Closed-Loop Dynamic Behavior	696
A3.6 Elementary Criteria for Synthesis	700
Annotated References	706
<b>References</b>	<b>707</b>
<b>Index</b>	<b>723</b>
<b>About the Author</b>	<b>729</b>
