# Contents

## Chapter 1 Introduction 1

- 1.1 Food quality: a primary concern of the food industry
  - 1.2 Automated evaluation of food quality
  - 1.3 Food quality quantization and process control
  - 1.4 Typical problems in food quality evaluation and process control
    - 1.4.1 Beef quality evaluation
    - 1.4.2 Food odor measurement
    - 1.4.3 Continuous snack food frying quality process control
  - 1.5 How to learn the technologies
- References

## Chapter 2 Data acquisition 11

- 2.1 Sampling
  - 2.1.1 Example: Sampling for beef grading
  - 2.1.2 Example: Sampling for detection of peanut off-flavors
  - 2.1.3 Example: Sampling for meat quality evaluation
  - 2.1.4 Example: Sampling for snack food eating quality evaluation
  - 2.1.5 Example: Sampling for snack food frying quality process control
- 2.2 Concepts and systems for data acquisition
  - 2.2.1 Example: Ultrasonic A-mode signal acquisition for beef grading
  - 2.2.2 Example: Electronic nose data acquisition for food odor measurement
  - 2.2.3 Example: Snack food frying data acquisition for quality process control
- 2.3 Image acquisition
  - 2.3.1 Example: Image acquisition for snack food quality evaluation
  - 2.3.2 Example: Ultrasonic B-mode imaging for beef grading

- 2.3.3 Example: Elastographic imaging for meat quality evaluation

## References

### Chapter 3 Data analysis 49

- 3.1 Data preprocessing
- 3.2 Data analysis
  - 3.2.1 Static data analysis
    - 3.2.1.1 Example: Ultrasonic A-mode signal analysis for beef grading
    - 3.2.1.2 Example: Electronic nose data analysis for detection of peanut off-flavors
  - 3.2.2 Dynamic data analysis
    - 3.2.2.1 Example: Dynamic data analysis of the snack food frying process
- 3.3 Image processing
  - 3.3.1 Image segmentation
    - 3.3.1.1 Example: Segmentation of elastograms for detection of hard objects in packaged beef rations
  - 3.3.2 Image feature extraction
    - 3.3.2.1 Example: Morphological and Haralick's statistical textural feature extraction from images of snack food samples
    - 3.3.2.2 Example: Feature extraction from ultrasonic B-mode images for beef grading
    - 3.3.2.3 Example: Haralick's statistical textural feature extraction from meat elastograms
    - 3.3.2.4 Example: Wavelet textural feature extraction from meat elastograms

## References

### Chapter 4 Modeling 99

- 4.1 Modeling strategy
  - 4.1.1 Theoretical and empirical modeling
  - 4.1.2 Static and dynamic modeling
- 4.2 Linear statistical modeling
  - 4.2.1 Example: Linear statistical modeling based on ultrasonic A-mode signals for beef grading
  - 4.2.2 Example: Linear statistical modeling for food odor pattern recognition by an electronic nose
  - 4.2.3 Example: Linear statistical modeling for meat attribute prediction based on textural features extracted from ultrasonic elastograms
  - 4.2.4 Example: Linear statistical dynamic modeling for snack food frying process control

- 4.3 ANN modeling
  - 4.3.1 Example: ANN modeling for beef grading
  - 4.3.2 Example: ANN modeling for food odor pattern recognition by an electronic nose
  - 4.3.3 Example: ANN modeling for snack food eating quality evaluation
  - 4.3.4 Example: ANN modeling for meat attribute prediction
  - 4.3.5 Example: ANN modeling for snack food frying process control

#### References

### Chapter 5 Prediction 143

- 5.1 Prediction and classification
  - 5.1.1 Example: Sample classification for beef grading based on linear statistical and ANN models
  - 5.1.2 Example: Electronic nose data classification for food odor pattern recognition
  - 5.1.3 Example: Snack food classification for eating quality evaluation based on linear statistical and ANN models
  - 5.1.4 Example: Meat attribute prediction based on linear statistical and ANN models
- 5.2 One-step-ahead prediction
  - 5.2.1 Example: One-step-ahead prediction for snack food frying process control
- 5.3 Multiple-step-ahead prediction
  - 5.3.1 Example: Multiple-step-ahead prediction for snack food frying process control

#### References

### Chapter 6 Control

- 6.1 Process control
- 6.2 Internal model control
  - 6.2.1 Example: ANNIMC for the snack food frying process
- 6.3 Predictive control
  - 6.3.1 Example: Neuro-fuzzy PDC for snack food frying process

#### References

### Chapter 7 Systems integration 201

- 7.1 Food quality quantization systems integration
- 7.2 Food quality process control systems integration
- 7.3 Food quality quantization and process control systems development

## 7.4 Concluding remarks
