<i>Preface</i>	<i>xi</i>
<i>Acknowledgments</i>	<i>xiii</i>
<i>Author's biography</i>	<i>xv</i>

Part 1	Introductory chapters	1
1	A business-centered approach to maintenance systems	3
1.1	Introduction	4
1.2	Business-centered maintenance	4
1.3	An example of the application of BCM: background	6
1.4	Part A: Audit of the FPP maintenance department	7
1.4.1	Maintenance objectives	8
1.4.2	Life plans and preventive schedule	9
1.4.3	Workload	11
1.4.4	Maintenance organization	12
1.4.5	Maintenance work planning	16
1.4.6	Maintenance control system	19
1.4.7	Maintenance documentation	23
1.4.8	Audit summary	25
1.5	Part B: An alternative maintenance strategy for continuous operation	25
1.6	Part C: A longer-term view of organizational change	26
1.7	The strategic thought process	27
2	Introduction to maintenance management systems	33
2.1	The company expressed as a hierarchic systems model	34
2.2	Identifying the maintenance systems	36
Part 2	Budgeting and control	39
3	Maintenance budgeting	41
3.1	Introduction	42
3.2	Maintenance budgeting	42
3.3	The budgeting procedure	45
4	Maintenance management control	53
4.1	Introduction	54
4.2	The basics of maintenance management control	55

4.3	Principles of maintenance management control	56
4.4	The control of overall maintenance performance	57
4.5	The control of maintenance effectiveness (the control of plant reliability)	61
4.5.1	Reactive control of plant reliability	61
4.5.2	Pro-active control of unit reliability	62
4.6	The control of organizational efficiency	63
4.7	Incorporating systems into the organization	64
4.8	Published methods for measuring maintenance performance	67
4.9	The use of indices of maintenance performance for inter-firm comparisons	67
4.10	Human factors and data collection	67
 Part 3 Work planning and work control		71
 5 Short-term work planning and control		73
5.1	Introduction	74
5.2	The fundamentals of work planning	74
5.3	Modeling the operation of a short-term work planning system	75
5.3.1	The shift work planning system	79
5.3.2	The weekend work planning system	81
5.3.3	Feedback of maintenance data for control	82
5.4	Comments on work planning and work control	83
5.5	Guidelines for the design of work planning systems	84
5.6	Safety aspects	88
 6 Management of plant turnarounds – Part 1: Network analysis		91
6.1	Introduction	92
6.2	Terms, concepts and definitions in network analysis	93
6.3	The network planning procedure	96
6.3.1	Data collection	97
6.3.2	Constructing the logic diagram	97
6.3.3	Establishing the critical path, floats and overhaul time	99
6.3.4	Deriving a bar chart from the network	101
6.3.5	Resource histograms	102
6.4	Comments	103
 7 Management of plant turnarounds – Part 2: Turnaround methodology		109
7.1	Introduction	110
7.2	Phase 1: Initiating the turnaround	110
7.2.1	Forming a policy team and appointing a turnaround manager	110

7.2.2	Key policy decisions for the initiation phase	113
7.2.3	Selecting a preparation team	114
7.2.4	Collecting the job lists and other data	114
7.3	Phase 2: Preparing the turnaround	114
7.3.1	Analyzing and validating the workscope	114
7.3.2	Freezing the worklist	116
7.3.3	Preparing task specifications	116
7.3.4	Identifying pre-shutdown work	116
7.3.5	Defining contractor work packages and selecting contractors	120
7.3.6	Creating the work schedule	120
7.3.7	Techniques for creating a schedule	120
7.3.8	Optimizing the schedule	123
7.3.9	Forming the turnaround organization	123
7.3.10	Defining the site logistics	125
7.3.11	Formulating a cost estimate	125
7.3.12	Formulating a safety plan	126
7.3.13	Formulation of the quality plan	127
7.3.14	Briefing of all turnaround personnel	127
7.4	Phase 3: Executing the turnaround	128
7.4.1	The shutdown of the plant	128
7.4.2	Carrying out the turnaround tasks	129
7.4.3	Defining and costing the extra work	129
7.4.4	Defining and costing additional work	129
7.4.5	Monitoring progress, productivity, safety, quality and expenditure	129
7.4.6	Starting up the plant	130
7.5	Phase 4: Terminating the turnaround	130

Part 4 Spare parts management 135

8	Spare parts management	137
8.1	Introduction	138
8.2	Outline of the stores operation	139
8.3	Inventory policy	142
8.3.1	Inventory policy for fast-moving spares	142
8.3.2	Inventory policies for the control of slow-moving spares	145
8.4	Management of repairable equipment (rotables)	150
8.4.1	Introduction	150
8.4.2	The rotatable system	150
8.4.3	Rotatable inventory policy: the theory	153
8.4.4	Rotatable inventory policy: in practice	155
8.5	Inventory policy guidelines	155
8.6	Stores documentation	156

8.7	Stores organization	160
8.8	Stores and rotatable performance indices	161
8.9	Summary	162

Part 5 Documentation 165

9 Maintenance documentation systems: what they are and how they work 167

9.1	Introduction	168
9.2	A functional model	168
9.3	Plant inventory (Module 1)	170
9.4	Information base (Element 2)	172
9.5	Preventive maintenance schedule (Module 3)	177
9.6	Condition monitoring (Module 4)	179
9.7	Short-term work planning (Module 5)	180
9.8	Long-term work planning (Module 6)	182
9.9	Maintenance control (Module 7)	185
9.10	Summary	187

10 Computerized maintenance information systems: their uses and problems 189

10.1	Introduction	190
10.2	Computerized documentation: historical background	190
10.3	The benefits of computerized maintenance information systems	193
10.4	The problems with computerized maintenance information systems	195
10.5	Summary	196

Part 6 Case study 199

11 Case study: Maintenance audit of an agricultural chemical plant 201

11.1	Introduction	202
11.2	An overview of Fertec A	202
11.3	Objectives	203
11.3.1	Comments on objectives	204
11.4	Maintenance strategy	206
11.4.1	Plant-operating characteristics	206
11.4.2	Ammonia plant maintenance strategy	206
11.5	Maintenance organization	212
11.5.1	Introduction	212
11.5.2	The maintenance resource structure	212
11.5.3	The maintenance administrative structure	215

11.6	Work planning systems	217
11.6.1	Short-term work planning, scheduling and control	217
11.6.2	The planning of the major shutdowns	223
11.7	Spare parts management	225
11.7.1	Introduction	225
11.7.2	Outline of the stores organization and systems	225
11.8	Maintenance control	226
11.8.1	The control of overall maintenance performance	226
11.8.2	The control of organizational efficiency	226
11.8.3	The control of maintenance effectiveness (plant reliability control)	227
11.9	Documentation	227
11.9.1	Comments and recommendations	228

Appendix: Weibull analysis **229**

A.1	Weibull analysis of item lifetime	229
A.2	Weibull probability paper	232
A.3	A Weibull analysis of a large and complete sample of times-to-failure	232
