

# CONTENTS

	Preface	xi
CHAPTER 1	INTRODUCTION	1
	1.1 Soil Behavior in Civil and Environmental Engineering	1
	1.2 Scope and Organization	3
	1.3 Getting Started	3
CHAPTER 2	SOIL FORMATION	5
	2.1 Introduction	5
	2.2 The Earth's Crust	5
	2.3 Geologic Cycle and Geological Time	6
	2.4 Rock and Mineral Stability	7
	2.5 Weathering	8
	2.6 Origin of Clay Minerals and Clay Genesis	15
	2.7 Soil Profiles and Their Development	16
	2.8 Sediment Erosion, Transport, and Deposition	18
	2.9 Postdepositional Changes in Sediments	25
	2.10 Concluding Comments	32
	Questions and Problems	33
CHAPTER 3	SOIL MINERALOGY	35
	3.1 Importance of Soil Mineralogy in Geotechnical Engineering	35
	3.2 Atomic Structure	38
	3.3 Interatomic Bonding	38
	3.4 Secondary Bonds	39
	3.5 Crystals and Their Properties	40
	3.6 Crystal Notation	42
	3.7 Factors Controlling Crystal Structures	44
	3.8 Silicate Crystals	45
	3.9 Surfaces	45
	3.10 Gravel, Sand, and Silt Particles	48
	3.11 Soil Minerals and Materials Formed by Biogenic and Geochemical Processes	49
	3.12 Summary of Nonclay Mineral Characteristics	49
	3.13 Structural Units of the Layer Silicates	49
	3.14 Synthesis Pattern and Classification of the Clay Minerals	52
	3.15 Intersheet and Interlayer Bonding in the Clay Minerals	55
	3.16 The 1:1 Minerals	56
	3.17 Smectite Minerals	59
	3.18 Micalike Clay Minerals	62
	3.19 Other Clay Minerals	64

	3.20	Summary of Clay Mineral Characteristics	65
	3.21	Determination of Soil Composition	65
	3.22	X-ray Diffraction Analysis	70
	3.23	Other Methods for Compositional Analysis	74
	3.24	Quantitative Estimation of Soil Components	79
	3.25	Concluding Comments	80
		Questions and Problems	81
CHAPTER	4	SOIL COMPOSITION AND ENGINEERING PROPERTIES	83
	4.1	Introduction	83
	4.2	Approaches to the Study of Composition and Property Interrelationships	85
	4.3	Engineering Properties of Granular Soils	85
	4.4	Dominating Influence of the Clay Phase	94
	4.5	Atterberg Limits	95
	4.6	Activity	97
	4.7	Influences of Exchangeable Cations and pH	97
	4.8	Engineering Properties of Clay Minerals	98
	4.9	Effects of Organic Matter	104
	4.10	Concluding Comments	105
		Questions and Problems	106
CHAPTER	5	SOIL FABRIC AND ITS MEASUREMENT	109
	5.1	Introduction	109
	5.2	Definitions of Fabrics and Fabric Elements	110
	5.3	Single-Grain Fabrics	112
	5.4	Contact Force Characterization Using Photoelasticity	119
	5.5	Multigrain Fabrics	121
	5.6	Voids and Their Distribution	122
	5.7	Sample Acquisition and Preparation for Fabric Analysis	123
	5.8	Methods for Fabric Study	127
	5.9	Pore Size Distribution Analysis	135
	5.10	Indirect Methods for Fabric Characterization	137
	5.11	Concluding Comments	140
		Questions and Problems	140
CHAPTER	6	SOIL–WATER–CHEMICAL INTERACTIONS	143
	6.1	Introduction	143
	6.2	Nature of Ice and Water	144
	6.3	Influence of Dissolved Ions on Water	145
	6.4	Mechanisms of Soil–Water Interaction	146
	6.5	Structure and Properties of Adsorbed Water	146
	6.6	Clay–Water–Electrolyte System	153
	6.7	Ion Distributions in Clay–Water Systems	153
	6.8	Elements of Double-Layer Theory	154
	6.9	Influences of System Variables on the Double Layer	157
	6.10	Limitations of the Gouy–Chapman Diffuse Double Layer Model	159
	6.11	Energy and Force of Repulsion	163
	6.12	Long-Range Attraction	164
	6.13	Net Energy of Interaction	164
	6.14	Cation Exchange—General Considerations	165
	6.15	Theories for Ion Exchange	167
	6.16	Soil–Inorganic Chemical Interactions	167
	6.17	Clay–Organic Chemical Interactions	168

	6.18	Concluding Comments	169
		Questions and Problems	169
CHAPTER 7		EFFECTIVE, INTERGRANULAR, AND TOTAL STRESS	173
	7.1	Introduction	173
	7.2	Principle of Effective Stress	173
	7.3	Force Distributions in a Particulate System	174
	7.4	Interparticle Forces	174
	7.5	Intergranular Pressure	178
	7.6	Water Pressures and Potentials	180
	7.7	Water Pressure Equilibrium in Soil	181
	7.8	Measurement of Pore Pressures in Soils	183
	7.9	Effective and Intergranular Pressure	184
	7.10	Assessment of Terzaghi's Equation	185
	7.11	Water–Air Interactions in Soils	188
	7.12	Effective Stress in Unsaturated Soils	190
	7.13	Concluding Comments	193
		Questions and Problems	193
CHAPTER 8		SOIL DEPOSITS—THEIR FORMATION, STRUCTURE, GEOTECHNICAL PROPERTIES, AND STABILITY	195
	8.1	Introduction	195
	8.2	Structure Development	195
	8.3	Residual Soils	200
	8.4	Surficial Residual Soils and Taxonomy	205
	8.5	Terrestrial Deposits	206
	8.6	Mixed Continental and Marine Deposits	209
	8.7	Marine Deposits	209
	8.8	Chemical and Biological Deposits	212
	8.9	Fabric, Structure, and Property Relationships: General Considerations	213
	8.10	Soil Fabric and Property Anisotropy	217
	8.11	Sand Fabric and Liquefaction	223
	8.12	Sensitivity and Its Causes	226
	8.13	Property Interrelationships in Sensitive Clays	235
	8.14	Dispersive Clays	239
	8.15	Slaking	243
	8.16	Collapsing Soils and Swelling Soils	243
	8.17	Hard Soils and Soft Rocks	245
	8.18	Concluding Comments	245
		Questions and Problems	247
CHAPTER 9		CONDUCTION PHENOMENA	251
	9.1	Introduction	251
	9.2	Flow Laws and Interrelationships	251
	9.3	Hydraulic Conductivity	252
	9.4	Flows Through Unsaturated Soils	262
	9.5	Thermal Conductivity	265
	9.6	Electrical Conductivity	267
	9.7	Diffusion	272
	9.8	Typical Ranges of Flow Parameters	274
	9.9	Simultaneous Flows of Water, Current, and Salts Through Soil-Coupled Flows	274
	9.10	Quantification of Coupled Flows	277

	9.11	Simultaneous Flows of Water, Current, and Chemicals	279
	9.12	Electrokinetic Phenomena	282
	9.13	Transport Coefficients and the Importance of Coupled Flows	284
	9.14	Compatibility—Effects of Chemical Flows on Properties	288
	9.15	Electroosmosis	291
	9.16	Electroosmosis Efficiency	294
	9.17	Consolidation by Electroosmosis	298
	9.18	Electrochemical Effects	303
	9.19	Electrokinetic Remediation	305
	9.20	Self-Potentials	305
	9.21	Thermally Driven Moisture Flows	307
	9.22	Ground Freezing	310
	9.23	Concluding Comments	319
		Questions and Problems	320
CHAPTER	10	VOLUME CHANGE BEHAVIOR	325
	10.1	Introduction	325
	10.2	General Volume Change Behavior of Soils	325
	10.3	Preconsolidation Pressure	327
	10.4	Factors Controlling Resistance to Volume Change	330
	10.5	Physical Interactions in Volume Change	331
	10.6	Fabric, Structure, and Volume Change	335
	10.7	Osmotic Pressure and Water Adsorption Influences on Compression and Swelling	339
	10.8	Influences of Mineralogical Detail in Soil Expansion	345
	10.9	Consolidation	348
	10.10	Secondary Compression	353
	10.11	In Situ Horizontal Stress ( $K_0$ )	355
	10.12	Temperature–Volume Relationships	359
	10.13	Concluding Comments	365
		Questions and Problems	366
CHAPTER	11	STRENGTH AND DEFORMATION BEHAVIOR	369
	11.1	Introduction	369
	11.2	General Characteristics of Strength and Deformation	370
	11.3	Fabric, Structure, and Strength	379
	11.4	Friction Between Solid Surfaces	383
	11.5	Frictional Behavior of Minerals	389
	11.6	Physical Interactions Among Particles	393
	11.7	Critical State: A Useful Reference Condition	400
	11.8	Strength Parameters for Sands	404
	11.9	Strength Parameters for Clays	411
	11.10	Behavior After Peak and Strain Localization	415
	11.11	Residual State and Residual Strength	417
	11.12	Intermediate Stress Effects and Anisotropy	422
	11.13	Resistance to Cyclic Loading and Liquefaction	425
	11.14	Strength of Mixed Soils	432
	11.15	Cohesion	436
	11.16	Fracturing of Soils	438
	11.17	Deformation Characteristics	444
	11.18	Linear Elastic Stiffness	447
	11.19	Transition from Elastic to Plastic States	452
	11.20	Plastic Deformation	456
	11.21	Temperature Effects	460

	11.22	Concluding Comments	462
		Questions and Problems	462
CHAPTER 12		TIME EFFECTS ON STRENGTH AND DEFORMATION	465
	12.1	Introduction	465
	12.2	General Characteristics	466
	12.3	Time-Dependent Deformation–Structure Interaction	470
	12.4	Soil Deformation as a Rate Process	478
	12.5	Bonding, Effective Stresses, and Strength	481
	12.6	Shearing Resistance as a Rate Process	488
	12.7	Creep and Stress Relaxation	489
	12.8	Rate Effects on Stress–Strain Relationships	497
	12.9	Modeling of Stress–Strain–Time Behavior	503
	12.10	Creep Rupture	508
	12.11	Sand Aging Effects and Their Significance	511
	12.12	Mechanical Processes of Aging	516
	12.13	Chemical Processes of Aging	517
	12.14	Concluding Comments	520
		Questions and Problems	520
		List of Symbols	523
		References	531
